From the mind of renowned mathematician and magician Persi Diaconis comes a new book of card magic that will amaze and astonish.

Mathematical Card Magic: 52 New Effects uses the power of mathematics to create tricks that are both visually stunning and intellectually challenging.

Diaconis, a professor of statistics at Stanford University, has been performing magic for over 50 years. He is the author of several books on the subject, including *The Magic Book* and *Shuffle, Cut and Deal*. In *Mathematical Card Magic*, Diaconis shares 52 of his favorite tricks, each of which is based on a different mathematical principle.

Some of the tricks in the book are simple to perform, while others are more challenging. But all of them are explained clearly and concisely, with plenty of illustrations and diagrams. Whether you're a seasoned magician or a complete novice, you'll find something to enjoy in this book.

Here are just a few of the tricks you'll learn in *Mathematical Card Magic*:

- The Birthday Trick: Guess the birthday of any spectator using only a deck of cards.
- The Matrix Trick: Make four aces appear in a seemingly random Free Download.
- The Monte Carlo Trick: Find the location of a hidden card using probability theory.
- The Transposition Trick: Switch the positions of two cards without touching them.
- The Vanishing Trick: Make a card vanish into thin air.

These are just a few of the many tricks you'll find in *Mathematical Card Magic*. With clear and concise instructions, Diaconis explains each trick in detail, providing the mathematical principles behind it. Whether you're a seasoned magician or a complete novice, you'll find something to enjoy in this book.

So sit back, relax, and prepare to be amazed.
